ILINE COLUMN ARRAY

Complete iLINE COLUMN ARRAY set

"Column Array" column systems

Aesthetically pleasing, the system comes with 2 families of columns. One for installation with columns iLINE23, iLINE43, iLINE83, and the other for stage performance with the iLiNE83B model.

They are linked and powered by an active subwoofer, the iLINEsub12A which embeds a double amplification of 700W/5 Ohms in class D for the columns and 700W/4 Ohms for the lower part because we can also add the iLINEsub12A as a reinforcement, which is the passive version of the subwoofer.

Modulate your desires.

Whether for mobile or fixed use, the system answers all your problems.

The system offers multiple possible combinations, for example, 2 columns, 1 subwoofer or 2 subwoofers, 2 columns, etc.

Once controlled by an active subwoofer, the iLINEsub12P passive subwoofers can supply the satellites for numerous configurations.

A system that travels well.

Lightweight and robust, the subwoofers are made of a very resistant wood, Finnish birch multi-ply plywood with a protective polyurethane resin coating, which is very resistant to weather and scratches.

You can transport your entire iLINE system anywhere.

Touch the power, that's all!

If you want to touch the system's sound settings, an "iLINEbox" USB to RJ45 converter is sold separately. This box is needed if you want to adjust the built-in DSP.

The native DSP is preset to factory settings in order to ensure optimal system behaviour.

Only compatible with Windows

MINI LINE ARRAY CUB

"MODULARITY" IS THE KEY WORD FOR QUALIFYING THIS SYSTEM.

Whether for fixed installation or mobile use, this new concept is very attractive.

The CUBsat4 speaker can of course be used alone in a classic multi-source installation but not only here, thanks to its ingenious integrated coupling and angulation system, you can make up your system very simply and thus obtain Line Array columns for up to eight speakers.

ATOM ACTIVE SPEAKERS

The ATOM series is equipped with a simple DSP and is easy to use. It allows you to adjust and configure your speaker to the required use with the touch of a button. The internal processor's different presets adapt your speaker to the current use (front, backstage, etc.) but also the current sound application (DJ, Live, Speech, etc.) without forgetting the ability to correct bass and treble +/- 10dB in order to compensate for a room's acoustic problems, for example.

Each ATOM speaker offers two inputs and one output, a large choice of connectivity in order to connect all kinds of sources at Micro or Line level.

The design of this new series provides usage flexibility and exceptional installation thanks to M10 attachment points, backstage position and an ingenious 35mm double position base allowing the speaker to be used on a stand in a straight or inclined position of 7.5° downwards.

DANTE™ requirements:

Currently not all audio equipment can talk Dante™ language. The new Synq Dante™ I/O interfaces translate analog audio to and from Network Audio (Dante™).

Analog → Dante™:
- Connect your MIC to the Dante™ network
- Connect your Guitar, audio player, etc. to the Dante™ network

Dante™ → Analog:
- Connect the Dante™ network to your analog amplifier/active speaker
- Connect the Dante™ network to Recorder with analog input
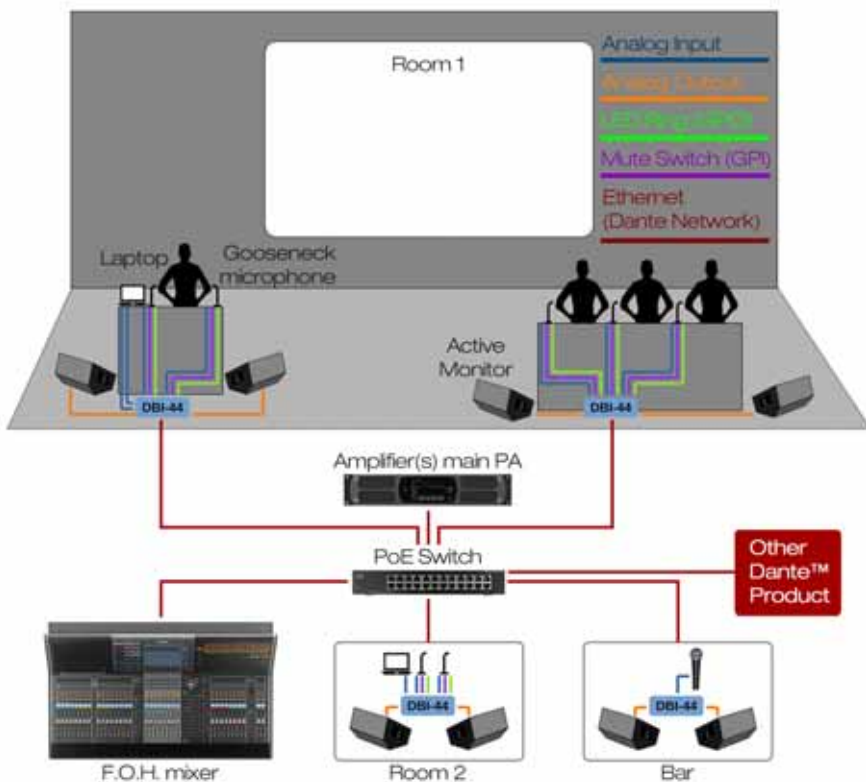

Multi-room install example using PoE

Room 1:

- Easy cabling :
1 single Cat5e network cable transports all audio signals in both directions. This makes it very easy to expand and modify the existing system.
- A single GPI trigger (here a potentiometer on the desk which is plugged into the DBI-44) sends a signal to the GPO connected devices (the gooseneck microphones and a LED light) to turn them on and off. GPIO can also be used to trigger or communicate with anything else on the network.
- Record and play audio from and to any room on the Dante™ network.

Room 2:

- No need for a separate mixer:
Mix all sources (2 microphones, one audio input from a computer, the audio from the main room) using the DBI-44 its integrated web browser and add EQ, compression, etc.
- If you need extra audio inputs just add an extra DBI-44 box. Thanks to the DBI-44 its integrated 8x8 matrix you can easily mix up to 8 separate inputs.
- GPIO allows you to control the gain of each microphone locally. Just connect a potentiometer to one of the GPI inputs.

Bar:

- The DBI-44 box allows the playback of background music originating from any sound source in the Dante™ network.
- The DBI-44 box also allows to connect an extra microphone for announcements

INTERIOR / EXTERIOR

The PHP650 speakers are also at ease indoors and outdoors. Their bodies are completely made of aluminium, allowing installation and continuous functioning, even when exposed to weather conditions. Thanks to their wide sound opening, they are perfect for use in big spaces

The columns are delivered with wall mounting brackets.
Aluminium speakers are designed to resist humidity. The wiring is mounted on a cable gland to ensure the waterproofing.

The multi-speaker system columns allows a diffusion very wide while reducing the vertical angle.
This prevents echoes.
The column is therefore the ideal tool for speeches in big spaces.

HEARING LOOP SYSTEM
ABOUT THE HEARING LOOP SYSTEM

A hearing loop or induction loop is a hearing aid system for the hearing-impaired using a magnetic induction loop.

With this system, the sound from a speaker's microphone, PA equipment, TV set, etc. is transmitted wirelessly to the hearing aid of the person, who can hear it without being disturbed by any ambient noise. This system is mainly used in public places (conference rooms, cinemas, courts, churches, counters, etc.)

A large number of conventional hearing aids incorporate the "T" loop function.
Hearing loops are mainly installed in rooms.

The installation consists of an electrical wire that travels around the perimeter of the room thus forming a loop. This loop is connected to an audio amplifier. The hearing aid has a coil, often called "T" or "T-coil".
This coil, placed inside the hearing aid, is also made of a wire that makes a large number of turns.

MAGNETIC FIELD

The magnetic field generated by the large loop around the room will cross the small loops in the hearing aid and, by the principle of induction, the electrical signal present in the large loop will end up in the small ones.

This is how the signal from the audio amplifier is transmitted to the hearing aid, which will then return it to the ear of the hearing-impaired person.

REGULATIONS

The 2005 - 102 Act of 11 February 2005 sets out the requirement for public establishments to be accessible to people with disabilities before 1 January 2018
This obviously applies to establishments open to the public, such as:
Administrative and cultural facilities,
Health buildings,
Sports facilities,
But also supermarkets, cinemas, public transport, etc.

Facilities must comply with the standard: EN 60118-4:
Background noise (electromagnetic pollution) must be < 32 dB at 400 mA/m
The magnetic field must be between +/- 3 dB for a signal from 1 kHz to 400 mA/m
The frequency response must be 100 Hz - 5 kHz at +/- 3dB

UVTAPE

ADVANTAGES
of the LEDs?

- **Long life, low maintenance**
- **Low energy cost**
- **Resistant to shocks and vibrations**
- **Very compact format**
- **No infrared and UV emissions**

Ra 80

RA OR CRI
An Ra equal to 100 corresponds to natural daylight. At this level, the colours are perceived without any change (or loss) for the human eye.

LEDs which diffuse artificial light cannot claim an CRI greater than 90. In places that require that colours are complied with (e.g. points of sale or exhibitions), it is essential to provide equipment with an index greater than 70).

COLOUR TEMPERATURE

The unit of colour temperature is Kelvin degree (K°).
The lower the degree of temperature, the warmer the light. The higher the degree of temperature, the colder the light.

WHAT TYPE OF LED?

—
5054: 4 chips (RGBW) of 0.32w/led
Good brightness
—
5630: 1 chip of 0.33w/led
Very high brightness
Only monochrome

—
5050: 3 chips (RGB) of 0.24w/led
Good brightness

—
5050: 1 hot white or cold white chip of 0.24w/led
High brightness

Ideal for ambient lighting

—
3527: 2 chips (warm white cold white) of 0.16w/led

—
WS2812B:
3 RGB chips of 0.24w/led with integrated control circuit
Each LED can be controlled independently

The ribbons of the SMARTTAPE range are equipped with the latest WS2812B LED technology. In SMD5050 (5x5mm) format, the integrated control circuit is directly embedded in the component. More discreet, these LEDs make it possible to have ribbons of only 10mm width with a pitch of only 16mm for the SMARTTAPE6020 model.

The installation is very simple, as only 3 cables are needed for operation ("+", "-", Data in).

Associated with a power supply and a SMARTCTL controller, you will get 300 kinds of patterns with the ability to control the speed and brightness.

WHAT LENGTH OF RIBBON?

The maximum ribbon length is not determined solely by the power of the power supply and the driver. It is also determined by the current intensity that can be supported by the ribbon circuit. You will be able to double the maximum length referenced in the table below by powering the ribbon at both ends.

HOW TO CHOOSE A POWER SUPPLY?

What is the consumption of a ribbon in W and which power supply should I choose?

Example:
9m of RGB ribbon with 60 LEDs/m 14.4 W/m in 24 V (COLOURTAPE6065)

Consumption of a length L of ribbon (in W) = length (m) x power/meter (w/m)
The ribbon will consume 14.4 x 9 = 129.6 W

Power supply choice:
An additional 10% of power must be added to the power supply.
In the same example:
129.6+10%= 142.56 W

POW246IP2 which is 150W

THE TYPES OF LIGHT DIFFUSION

Milk - Opaline diffuser
Diffusion, it makes it possible to make signage.
You do not see the LEDs

Frost - 50% diffusing
Ambient lighting. It diffuses the light (if the chosen profile is deep enough).

Crystal - Transparent
For lighting, it protects LEDs
Using the cover will attenuate the brightness of the ribbon according to its opacity.

Designed for installation

The projectors of the IPZOOM, IPSPOT and BT-ColoRay range are equipped with ergonomics perfectly adapted to fixed or temporary installations. Their robust cast aluminium and IP65 housing allow for continuous use outdoors. The air valve avoids condensation and removes moisture from the projector.

The bright OLED or LCD display allows you to visualize & set the different menu options manually. Thanks to the use of touch buttons a waterproof barrier is maintained, without wear of buttons.

Tight connections

IPZOOM's such as IPSPOT and BT-ColoRay are equipped with inputs and outputs dedicated to the power supply and DMX link. In order to improve discretion and ease of wiring, the IPZOOMs are equipped with waterproof chassis and plugs.

Chassis sealing is ensured by plugs. In addition to the adapters supplied, you will find a whole range of optional cables and plugs in order to make waterproof connections to other products from our range.

SCENOGRAPHY PROJECTORS

"The scenographer is the one who composes with volumes, objects, colours, lights and textures".

This term "scenographer" consists of three major categories:

- The scenographer of a show who puts on a show or a particular event.
- The scenographer of equipment who designs a place intended to host live shows or various events.
- The scenographer of exhibitions who intervenes in the field of museums and exhibitions.

EQUIPMENT FOR PERMANENT OR TEMPORARY EXHIBITION

A high performance, a very long life and low power consumption allow the LED source to integrate compact, aesthetic and efficient projectors.

They will enhance all kinds of places and surfaces while respecting the subjects lit.

STAGE EQUIPMENT FOR LIVE PERFORMANCE

Economical in energy and easy to install, the products of the ScenograFX range are ideal lighting solutions for the optimisation of all your events

The projectors in the range offer lighting quality and dimming that are identical to filament lamps thanks to the different built-in dimmer modes.

LED LIGHT SOURCES

The LED light sources provide new solutions in many areas. Currently, LEDs are used for theatrical, architectural and event lighting.

Building on the success of their range of animation projectors, Contest® and Briteq® develop this technology with the creation of a new range of projectors designed to produce exceptional brightness with great optical and ergonomic quality.
